

IMPLEMENTED • AWAITING APPROVAL

AMCHAM Tanzania Digital Platform

Website proposal and implementation proof

A modern public website, member workspace and Secretariat command centre—built as one connected platform and ready to be hosted after approval.

Prepared for AMCHAM Tanzania • July 2026

THE PROPOSITION

Not a concept. A working implementation.

01 Public experience

Responsive pages for membership, events, news, resources, galleries and company discovery.

02 Member self-service

A secure company workspace for profiles, submissions and documents.

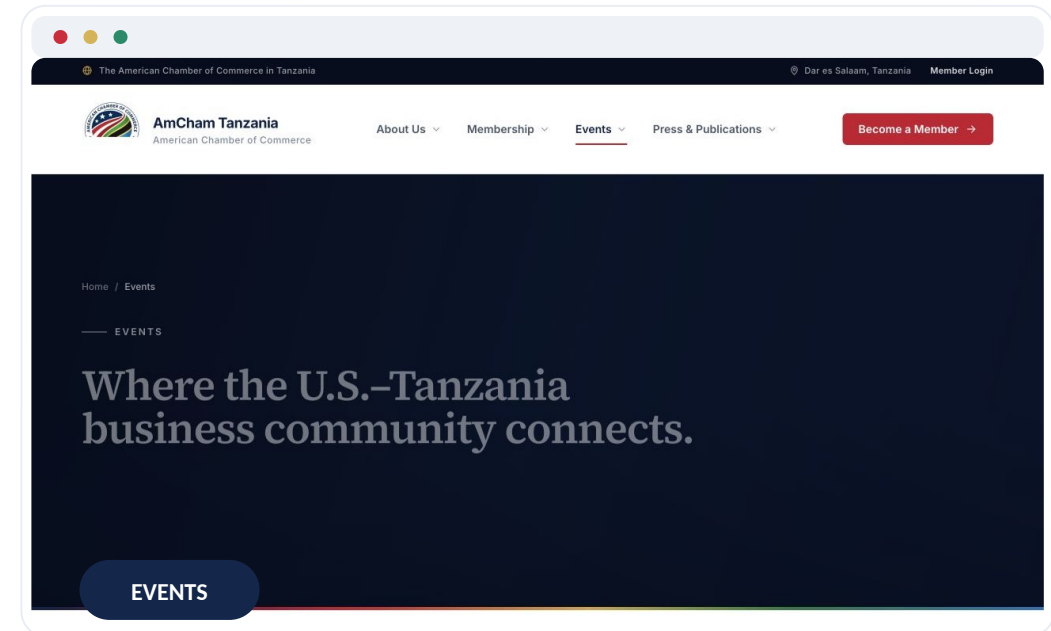

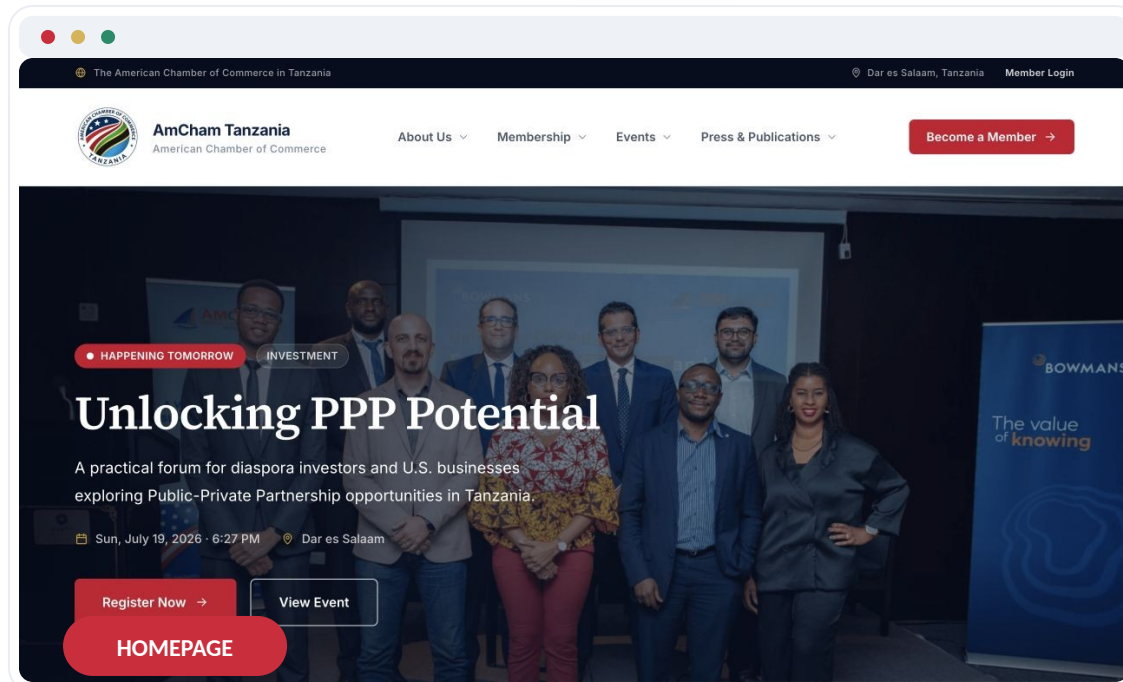

03 Secretariat control

Publishing, approvals, uploads and member operations from one administration hub.

PUBLIC EXPERIENCE

A confident front door for trade and membership.

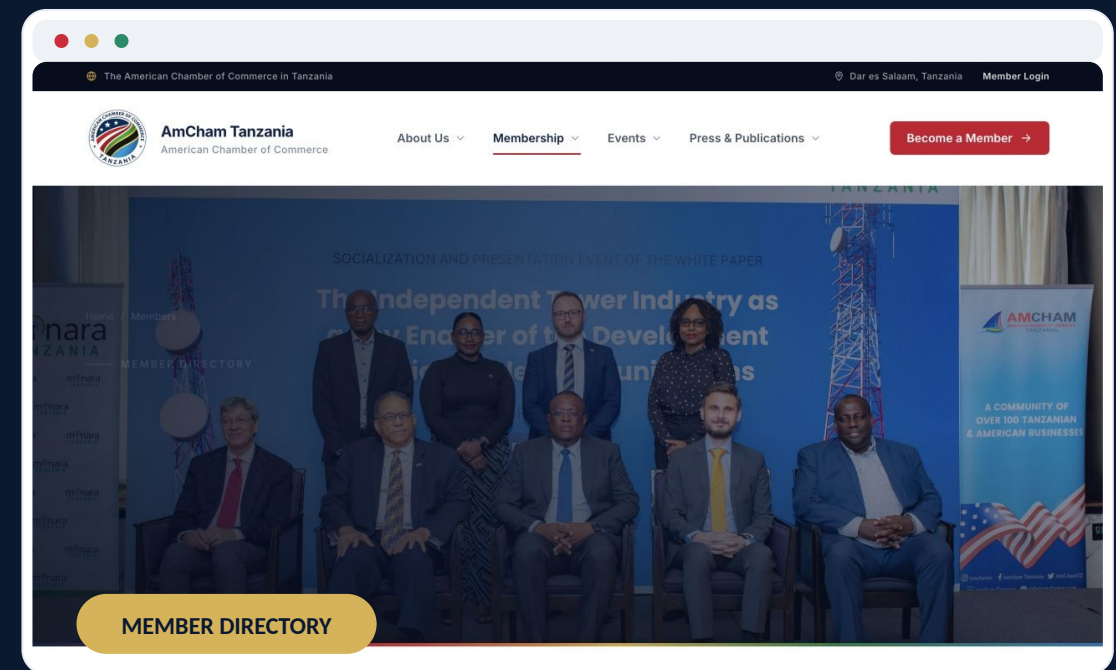

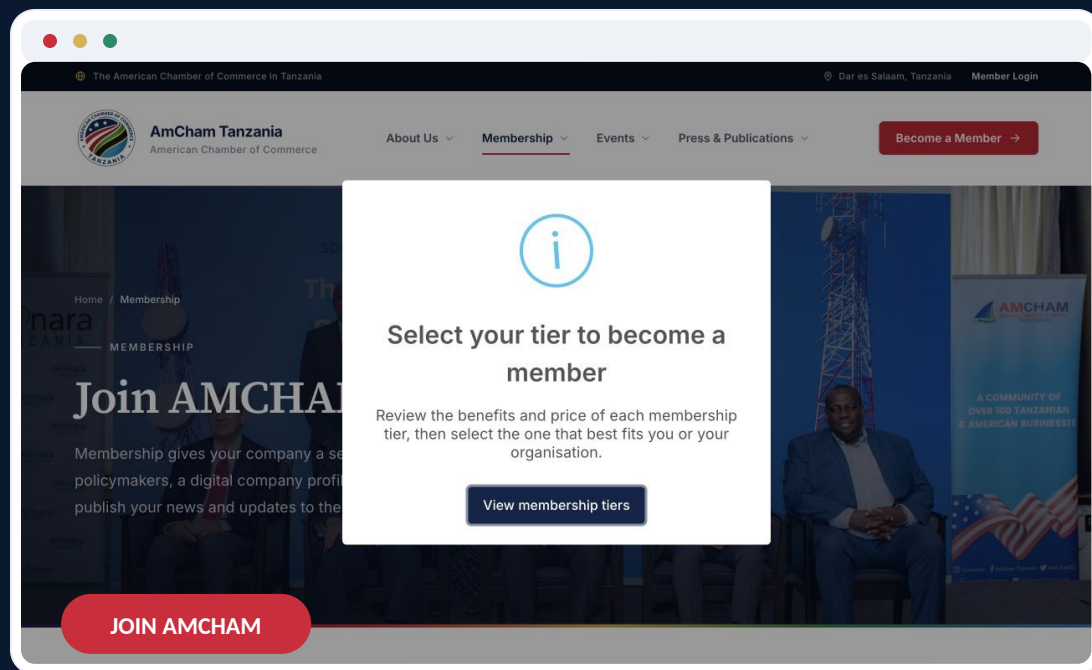

Clear navigation turns AMCHAM's value into visible pathways: discover, participate, join and return.

MEMBERSHIP GROWTH

Membership becomes a guided digital journey.

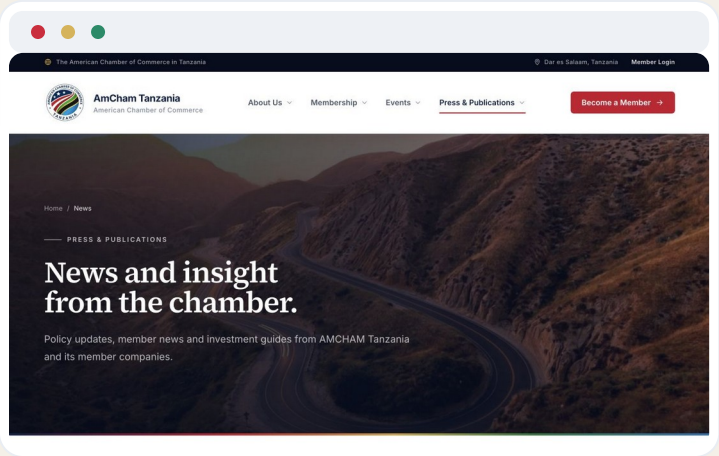

Prospects can understand the proposition, explore the network and move directly toward application.

A clearer value story supports recruitment while the directory demonstrates the strength of the network.

CONTENT AND ENGAGEMENT

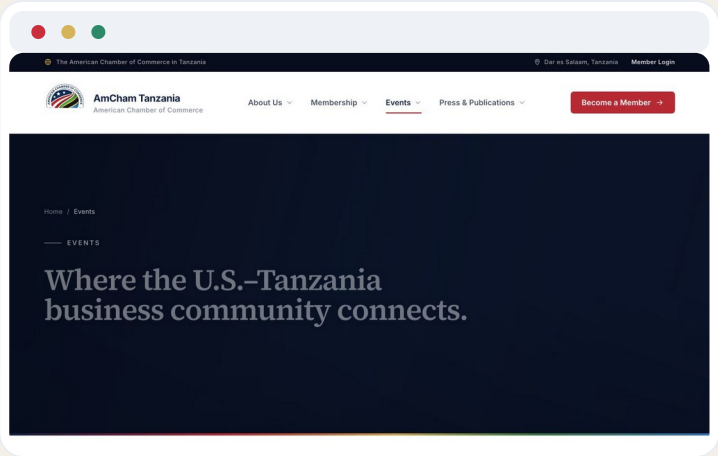

Events and publications stay visible—and current.

NEWS & INSIGHTS

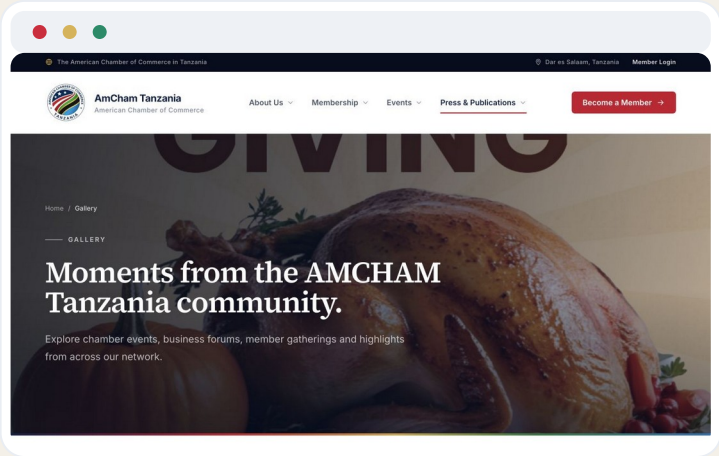

Publish analysis, updates and member stories.

Newsletters and resources are uploaded by administrators and presented through the same trusted experience.

EVENTS

Promote participation and manage what is live.

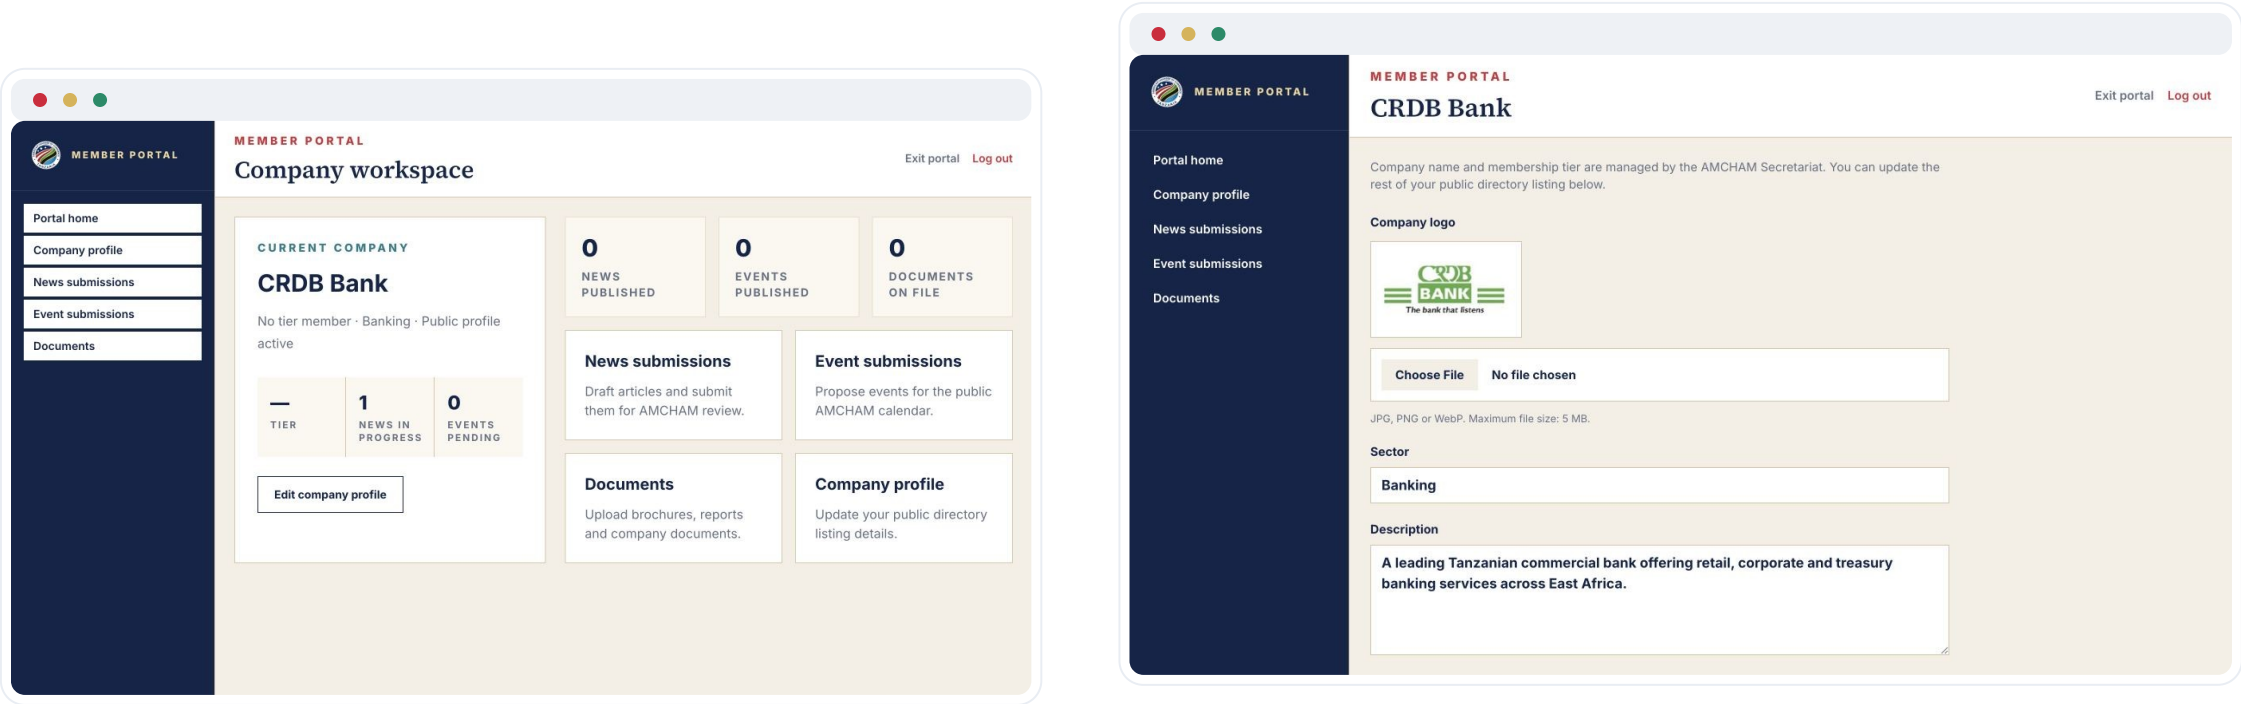

GALLERY

Turn chamber activity into visual proof.

MEMBER WORKSPACE

Members have a workspace of their own.

Each company can keep its presence accurate and contribute content through a controlled review process.

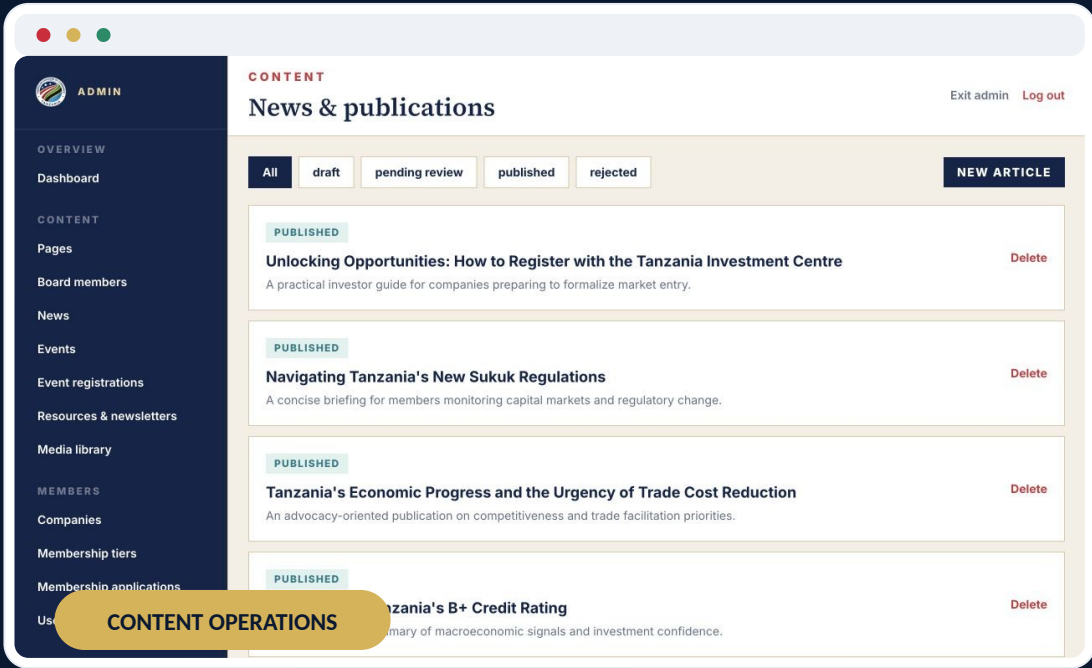

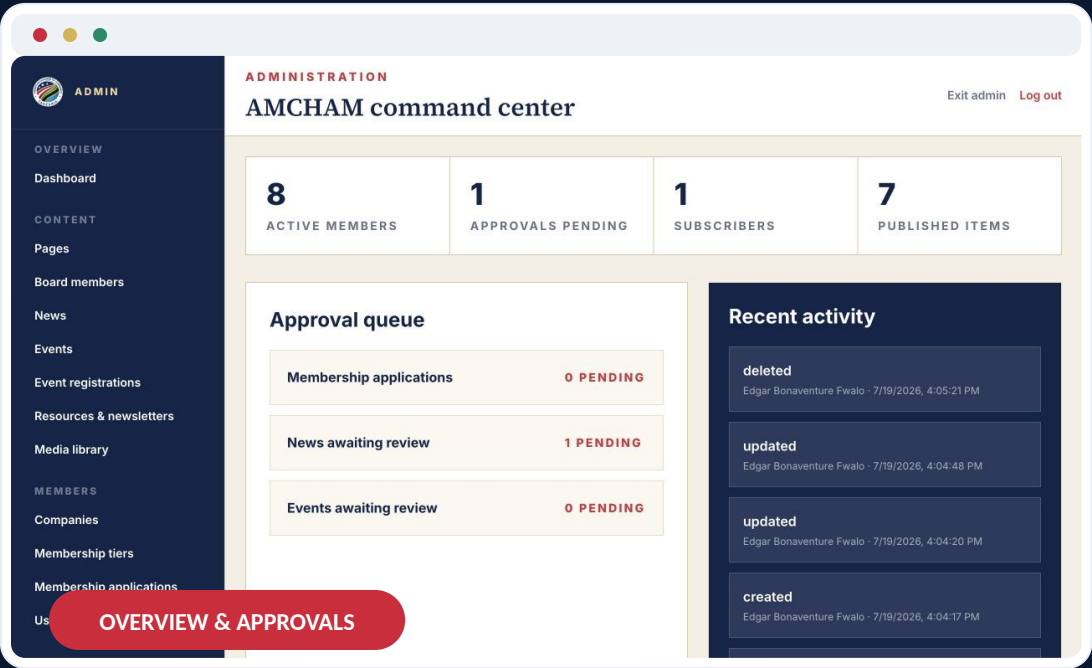

COMPANY PROFILE • NEWS SUBMISSIONS • EVENT SUBMISSIONS • DOCUMENTS

Member-created items remain governed: draft → submit → Secretariat review → publish.

SECRETARIAT COMMAND CENTRE

One place to operate the entire platform.

The administration area brings approvals, publishing, uploads and member oversight into a single workflow.

CONNECTED COMMUNICATIONS

One publishing action activates the network.

Approved content can move from the platform to the right audiences by email—consistently and once.

01 Publish or approve

News, events and newsletters enter the live content stream.

02 Build the audience

Approved member-company addresses plus active subscribers are deduplicated.

03 Deliver by email

A single queued notification links recipients back to the website.

EMAIL ONLY

Clear preferences, safe unsubscribe handling and no SMS claims in the dashboard.

TRUST, VISIBILITY AND RESILIENCE

Built to be discoverable—and safe to operate.

SECURE IDENTIFIERS

UUID-backed records protect internal identity; public content uses readable slugs.

SAFER SUBMISSIONS

Validation, throttling and anti-spam controls protect forms and review queues.

CONTROLLED UPLOADS

Images and documents are validated, normalized and served from the public media structure.

ACCOUNT RECOVERY

Forgot-password responses preserve privacy while serving legitimate users properly.

SEARCH & SHARING

Canonical metadata, page descriptions, Open Graph images, favicon, sitemap and structured data.

PUBLISHING HYGIENE

Sanitized rich text, authorization checks and approval gates reduce content and access risk.

COMMERCIAL INVESTMENT

A complete platform for TZS 4,000,000.

The investment covers the website implementation demonstrated throughout this proposal.

WEBSITE DEVELOPMENT

TZS 4,000,000

One-time implementation fee

ONGOING MAINTENANCE

TZS 50,000

per month

Continued technical maintenance after hosting.

APPROVAL UNLOCKS HOSTING AND GO-LIVE PREPARATION

READY FOR APPROVAL

The build is ready. Approval brings it online.

The public experience, member workspace and Secretariat tools are complete in working form. Hosting begins once the proposal is approved.

NEXT Approval • Hosting configuration • Content sign-off • Go-live
